

To lead, represent, inform and support General Practice

Patient Reported Experiences and Outcomes of Safety in Primary Care

The South West Academic Health Science Network is supporting the Patient Reported Experiences and Outcomes of Safety in Primary Care (PREOS-PC) project. This service improvement and evaluation project involves the completion of an [online patient safety questionnaire](#).

The project is being overseen by Professor Tony Avery at Nottingham University and has now launched in the South West in collaboration with a team led by Professor Jose Valderas at the University of Exeter Medical School.

Ethical approval has been received from the Universities of Nottingham and Exeter, and a successful pilot has been carried out in the East Midlands. Following on from this success, we would like to offer all GP practices in Devon the opportunity to participate. In return, £200 is available for participating practices.

The team from the University of Exeter Medical School or the University of Nottingham will be in contact with practices about the project.

If you would like further information, or have any questions about the project, please contact Dr Jaheeda Gangannagaripalli, Postdoctoral Research Associate, Health Services and Policy Research Group, University of Exeter Medical School
